

# General Healthcare Information

Educational knowledge-base document for an AI Healthcare RAG prototype

## Introduction

General health includes habits and practices that support physical and mental well-being. Healthy routines commonly include adequate sleep, balanced nutrition, regular physical activity, hydration, hygiene, and appropriate preventive healthcare.

## Healthy Daily Habits

Regular physical activity, nutritious meals, adequate fluids, sufficient sleep, and good personal hygiene can support overall health. Habits should be appropriate for a person's age, circumstances, and individual needs.

## Preventive Healthcare

Preventive care may include routine health checkups, recommended vaccinations, screening when appropriate, dental care, and discussions with qualified healthcare professionals about individual risk factors.

## When to Seek Professional Help

Persistent, worsening, severe, or unexplained symptoms should be discussed with a qualified healthcare professional. Symptoms that appear to be an emergency should receive urgent medical attention.

## Important Note

This document is for educational and RAG demonstration purposes only. It is not a diagnosis, treatment plan, or substitute for professional medical advice.
